

Short Course: Realistic Failure Process Analysis

Dr. Chunan Tang

Center for Rock Instability and Seismicity Research

Dr. Tang is the Chair Professor (funded by Cheung Kong Scholar Programme from the State Education Ministry) and the Director of the Center for Rock Instability and Seismicity Research (CRISR) of Dalian University of Technology. He is also the Vice President of the Chinese Society of Rock Mechanics CSRM, and the China National Group Chairman of the International Society of Rock Mechanics. He obtained his Ph.D. degree in 1988 from the Northeastern University, Shenyang, China. In 1991, he continued his post-doctoral work in Imperial College, London, UK (worked with Prof. J. A. Hudson). Dr. Tang has extensive working experience in Canada, Sweden, Singapore, Switzerland, and Hong Kong. He leads several major research projects in rock mechanics, in the areas of rock failure process analysis and monitoring. His work is funded by the "Trans-Century Training Programme Foundation for Outstanding Young Scholars in China" from the State Education Ministry and by the "Special Natural Science Foundation for Outstanding Young Scholars in China" from National Nature Science Foundation. So far, he has published about 200 technical papers, and is the author of five Chinese books in rock mechanics and the principal author of "Rock Failure Instability and Related Aspects of Earthquake Mechanisms."
